# Biotechnological Applications Of Microbes

**Biotechnological Applications Of Microbes** - Sterile insect technique - Wikipedia The sterile insect technique (SIT) is a method of biological insect control, whereby overwhelming numbers of sterile insects are released into the wild. The released insects are preferably male, as this is more cost-effective and the females may in some situations cause damage by laying eggs in the crop, or, in the case of mosquitoes, taking blood from humans. Biotechnological potential of yeasts in functional food ... Background. Biotechnological potential of yeasts can be evidenced by the rich history of its application in food fermentation. Several yeast species isolated from fermented foods have been characterised and applied as starter/co-starter in functional food industries. Biotechnology and its Applications 209 BIOTECHNOLOGY AND ITS APPLICATIONS create pores that cause cell swelling and lysis and eventually cause death of the insect.
